

For Immediate Release

Novus Introduces Telescopic Monitor Arm ***A new space-saving option from More Space System.***

Peterborough, NH, April, 2017 -

Novus, a worldwide leader in premium office products, monitor arms, and office organization, introduces the TSS Telescopic arm III. This unique arm can extend and retract a monitor up to 3 ½”, making it ideal for configuring small, flexible workstations.

The new TSS telescopic arm III is a space-saving monitor arm that adjusts by sliding from 12” to 16” in length. This saves space when monitors need to be placed close to a wall or back-to-back. This innovative arm includes a QuickRelease snap-in monitor mount with rolling ball adjustment. Made of anodized aluminum, it combines strength with a clean, modern look.

“The telescoping monitor arm can easily extend and retract in a very small space,” said Shari LaPierre, Sales and Marketing Representative at Dahle North America, Inc. “It’s perfect for configuring any number of monitors in tight spaces.”

The Novus TSS system of monitor arms and accessories meet and exceed the challenge of creating versatile, comfortable work spaces in any environment.

Personalized workspace options from Novus deliver a clean look, improved ergonomics, and the freedom to easily change your space by adding more monitors, tablets, and organizational accessories as necessary. The More Space System is designed and developed by Novus Dahle GmbH & Co. KG of Lingen, Germany. Since 1949, Novus has offered premium office products and equipment for the modern workplace.
